

FIRE PREVENTION PLAN

Purpose

The purpose of this Fire Prevention Plan is to identify potential fire hazards and measures taken to prevent a fire from occurring and to control the ignition and spread of fires. All employees, supervisors, and managers are expected to follow the procedures outlined in this plan.

Authority

- In an effort to prevent fires and explosions and minimize the damage if they occur, building owners and occupiers are required to develop and implement an effective a Fire Safety Plan conforming to:

BC Fire Code

Potential Fire Hazards

- Electrical equipment, hydraulic fluid, motorized vehicles, compressed gases, portable gasoline powered equipment, welding, cutting, grinding, wood, wood products, sawdust, paints and solvents, etc.
- If applicable, all hot work and/or fire effects will be conducted with the approval of the local Fire Services. All necessary permits will be in place for said work.

Fire Control Measures

- Proper ventilation and housekeeping will be employed to minimize the potential buildup of flammable gases and sawdust or other combustible wastes.
- All welding, cutting and grinding will be limited to designated areas that are separated from other mill and shop areas.
- All flammable materials will be stored when not in active use in appropriate fireproof cabinets.
- In the event of a fire, local Fire Services (911) will respond.
- Fire Extinguishers will be available, as appropriate.
- Any additional fire prevention measures as deemed necessary by the local Fire Services (authority having jurisdiction).
